The Aluna Light Pole™ technology is a patented light conduit technology that replaces electrical contacts with light coupling. The base and light pole are corrosion free. The removable light pole contains no electrical components. The LED light source is encapsulated in the base and is waterproof.

The bottom load base Aluna Light Pole™, Flex Pole and Glow Pole are inserted from below into a base and are secured in place by the sliding cover. Light is projected from the LED in the base into the Aluna Light Pole™ and is emitted from the end in a 360 degree pattern according to USCG requirements. All Aluna Light Poles are USCG approved for 2 NM.

## Bottom Load Detachable All Around White Navigation Light

### T-Top Application

- ***Eliminates the uncomfortable and potentially dangerous requirement to access the top side of a T-Top as in fold down lights***
- ***The entire T-Top area can be used to mount the navigation light, including middle areas since there is no need for topside access***
- ***Combines low level boat area illumination for added safety at night as well as all around white navigation / anchor light***
