## Aluna Glow Pole

The Aluna Light Pole™ technology is a patented light conduit technology that replaces electrical contacts with light coupling. The base and light pole are corrosion free. The light pole itself contains no electrical components and is impervious to water and resistant to physical damage. The LED light source is encapsulated in the base and is waterproof. The Aluna Glow Pole is superior to LED light strips in outdoor and marine applications due to its more robust nature.

The Aluna Glow Pole provides low level illumination in multiple colors and applications. Colors include red, green, blue and white. Applications include boat curtesy / safety deck lighting, boat trailer underside illumination and boat trailer pole lighting. Other applications include dock and walkway illumination.

Aluna Glow Pole

- ***Waterproof encapsulated LED and inherently waterproof light pole***
- ***Light pole is solid and rugged, unlike LED light strips***
- ***Available in standard and custom lengths to 8 ft***
- ***Colors include red, green blue and white***
- ***Boat deck, trailer underside, trailer guide pole illumination***
- ***Dock pole and walkway illumination***
- ***Vertical and horizontal mounting***
