The Aluna Light Pole™ technology is a patented light conduit technology that replaces electrical contacts with light coupling. The base and light pole are corrosion free. The removable light pole contains no electrical components. The LED light source is encapsulated in the base and is waterproof.

The top load self-clearing screw thread base accepts Aluna Light Pole™, Glow Pole, Flex Pole and Flex-Glow Pole. It features self-clearing threads which displace sand and salt and securely hold light poles.

Light is projected from the LED in the base into the Aluna Light Pole™ and is emitted from the end in a 360 degree pattern according to USCG requirements. All Aluna Light Poles are USCG approved for 2NM.

Top Load Self-Clearing Threaded Detachable Light Poles

- ***Self-Clearing threads resists binding***
- ***Secure attachment***
- ***All versions of Aluna Light Poles available as FLOATING and are not harmed by immersion***
- ***Patented Light Coupling Technology Does not corrode like electrical contacts***
- ***Combines low level boat area illumination for added safety at night and all around navigation / anchor light.***
